The Hong Kong Voluntary Energy Efficiency Labelling Scheme for Fax Machines
Annexes

1. Test Procedure of Typical Electricity Consumption (TEC)
2. Test Procedure of Operation Mode (OM)
3. Energy Label Format
4. Proforma Letter of Invitation
5. Proforma Letter of Application
6. Information to be submitted to Energy Efficiency Office
7. Proforma Letter of Acceptance of Application
8. Proforma Letter of Rejection
9. Flow Chart for Registration

Tables

1. Maximum Allowable TEC for Fax Machines .................................................9
2. Maximum Allowable Default Time to Sleep Mode .................................10
3. Minimum Resolution for power meter .....................................................12
1. **Purpose**

This set of documents is intended to give a general description of the Hong Kong Voluntary Energy Efficiency Labelling Scheme for Fax Machines.

2. **Background**

2.1 The Energy Efficiency Labelling Scheme (EELS) is an energy conservation initiative that the Government of the Hong Kong Special Administrative Region (HKSAR) has adopted. Under the EELS, certain common types of appliances and equipment will incorporate an energy label that serves to inform consumers of the product’s energy consumption and energy efficiency. Consumers should then be able to take those factors into account in making their purchasing decisions.

2.2 The concept of EELS has been implemented in several forms and in different stages of development. In some countries, as well as in Hong Kong, it is a compulsory requirement for certain kinds of electrical appliances to be provided with an energy label before they can put on the market. The labelling requirements may apply to equipment such as household refrigerators, washing machines, room coolers, clothes dryers, compact fluorescent lamp, storage water heaters, etc. The EELS generally aims to achieve the following:

- greater public awareness of energy conservation and environmental improvement needs;
- provision of readily available, pre-purchase information on energy consumption and efficiency data, where applicable, to enable ordinary consumers to select more energy efficient products;
- stimulation to the manufacturers/market for phasing out less energy efficient models; and
- actual energy savings and environmental improvement.

2.3 Hong Kong also aims at achieving the above objectives and the Hong Kong Voluntary EELS now covers twenty types of household appliances and office equipment. Twelve types of which are electrical appliances and seven types of office equipment.
There is also one type of gas appliance for domestic gas instantaneous water heaters. The scope of EELS has also been extended to cover petrol passenger cars.

3. **Scope**

3.1 The requirements stipulated in this document will only apply to manufacturers and importers who have chosen to participate in the Hong Kong Voluntary Energy Efficiency Labelling Scheme for Fax Machines.

3.2 The scheme commenced on 12 July 2006. The revision of the scheme has been implemented from 1 January 2013 and will expire on 31 December 2015 when re-registration is necessary.

3.3 The labelling requirements stipulated in this scheme apply to all new registered fax machines imported into or manufactured in Hong Kong with effect from the dates declared by the participants, but do not cover second-hand products, products already in existing use, under trans-shipment or manufactured for export, etc.

3.4 The scheme will operate with a ‘Recognition Type’ energy label. All appliances will be recognised and registered provided that they can meet the energy efficiency and performance requirements stipulated in the scheme.

3.5 Both ordinary fax machines and printer/fax combinations are covered by this scheme.

3.6 Fax machine means a machine whose primary function is reading hardcopy input and sending information to another fax machine via communication line, as well as receiving information from another fax machine via communication link and producing hardcopy output. This scheme covers plain paper fax machines (e.g., ink jet/bubble jet, laser/LED, and thermal transfer) that are capable of being powered from a socket outlet, and are advertised and sold as fax machines.

3.7 Printer/fax combination means a machine that serves both as a fully-functional printer and a fax machine. The unit must be capable of being powered from a socket outlet, and should be marketed and sold as a printer/fax combination. This type of device does not have a scanning table. (Those with a scanning table are likely to be classified as “multifunction device” under the EELS.)
4. Definitions

Unless otherwise specified, the following definitions shall apply throughout this document:

**A4-sized paper** means paper measured 210 mm x 297 mm in dimensions.

**Accessory** means a piece of additional equipment that is not necessary for the standard operation of the base unit, but that may be added before or after shipment in order to enhance or change multifunction device’s performance. Any accessories fitted to the multifunction device shall not impede the normal operation of energy saving features such as sleep mode, etc.

**Active Mode** means the power state in which the product is connected to a power source and is actively producing output, as well as performing any of its other primary functions.

**Authority** means the Electrical and Mechanical Services Department of the Government of the Hong Kong Special Administrative Region (HKSAR).

**Automatic Duplexing** means the capability of a multifunction device to automatically produce images on both sides of an output sheet (paper), without manual manipulation of output as an intermediate step. Examples of this are one-sided to two-sided copying and two-sided to two-sided copying. A product is considered to have automatic duplexing capability only if the model includes all accessories needed to satisfy the above conditions.

**Base Unit** means the most basic version of a fax machine for a given product speed that is actually sold as a fully operational model. The base unit can be designed and shipped in a single piece or as a combination of functionally integrated components. The base unit must allow copying and one or both of the additional core functions of printing or faxing. The base unit does not include any external power-consuming accessories that may be sold separately.

**Default Time** means the time period set by the manufacturer prior to shipping that determines when the fax machines will enter a low-power modes (e.g. the Sleep Mode and Auto-off) following completion of its primary function.
**Digital Front-end (DFE)** means a functionally-integrated server that hosts other computers and applications and acts as an interface to the fax machine. A DFE provides greater functionality to the fax machine. A DFE will be defined as either:

Type 1 DFE: A DFE that draws its DC power from its own AC power supply (internal or external) which is separate from the power supply that powers the fax machine. This DFE may draw its AC power directly from a wall outlet, or it may draw it from the AC power associated with the fax machine’s internal power supply.

Type 2 DFE: A DFE that draws its DC power from the same power supply as the fax machine with which it operates. Type 2 DFES must have a board or assembly with a separate processing unit that is capable of initiating activity over the network and can be physically removed, isolated, or disabled using common engineering practices to allow power measurements to be made.

A DFE also offer at least three of the following advanced features:

(a) Network connectivity in various environments;

(b) Mailbox functionality;

(c) Job queue management;

(d) Machine management (e.g. waking the imaging equipment from a reduced power state);

(e) Advanced graphic user-interface;

(f) Ability to initiate communication with other host servers and client computers (e.g. scanning to email, polling remote mailboxes for jobs); or

(g) Ability to post-process pages (e.g. reformatting pages prior to printing).

**Director** means the Director of Electrical and Mechanical Services.

**Dye Sublimation (DS)** means a marking technology where images are formed by depositing (subliming) dye onto the print media based upon the amount of energy delivered by the heating elements.

**Direct Thermal (DT)** means a marking technology that transfers an image by burning dots onto coated media as it passes over a heated print head. DT products do not use ribbons.
Electro-Photography (EP) means a marking technology characterized by illumination of a photoconductor in a pattern representing the desired hard copy image via a light source, development of the image with particles of toner using the latent image on the photoconductor to define the presence or absence of toner at a given location, transfer of the toner to the final hard copy medium, and fusing to cause the desired hard copy to become durable. Types of EP include Laser, LED, and LCD. Colour EP is distinguished from monochrome EP in that toners of at least three different colours are available in a given product at one time. Two types of colour EP technology are:

a. Parallel Colour EP – A marking technology that uses multiple light sources and multiple photoconductors to increase the maximum color printing speed.

b. Serial Colour EP – A marking technology that uses a single photoconductor in a serial fashion and one or multiple light sources to achieve the multi-colour hard copy output.

Fax machine means a machine, manufactured as a standard model, whose primary function is reading hardcopy input and sending information to another fax machine/computer via communication line, as well as receiving information from another fax machine/computer via communication line and producing hardcopy output. This scheme covers plain paper fax machines (e.g., ink jet/bubble jet, laser/LED, and thermal transfer) capable of accepting A4-size hardcopy input and producing A4-size hardcopy output (and other paper sizes where appropriate), that are capable of being powered from a socket outlet, and are advertised and sold as fax machines.

Government means the Government of the Hong Kong Special Administrative Region (HKSAR).

High Performance Ink Jet (IJ) means the use of an IJ marking technology in high-performance business applications usually occupied by electrophotographic marking technology. This difference between the conventional IJ product and the High Performance IJ product is denoted by the presence of nozzle arrays that span the width of a page and/or the ability to dry the ink on the media through additional media heating mechanisms.

IEC means the International Electrotechnical Commission.

Impact means a marking technology characterized by formation of the desired hard copy image by transferring colorant from “ribbon” to media via an impact process. Two types of impact technology are DOT Formed Impact and Fully-formed Impact.
Ink Jet (IJ) means a marking technology where images are formed by depositing colorant in small drops directly to the print media in a matrix manner. Colour IJ is distinguished from monochrome IJ in that more than one colorant is available in a product at any one time. Typical types of IJ include Piezo-electric (PE) IJ, IJ Sublimation, and Thermal IJ.

Inspecting officer means the officer authorized by the Director to carry out inspection on appliances under this scheme.

ISO means the International Organization for Standardization

Label means the energy label as described in Section 7.

Media Format: Large Format: Products designed for A2 media and larger, including those designed to accommodate continuous-form media greater than or equal to 406 mm wide. Large-format products may also be capable of printing on standard-size or small-format media.

Standard Format: Products designed for standard-sized media (e.g., Letter, Legal, Ledger, A3, A4, B4), including those designed to accommodate continuous-form media between 210 mm and 406 mm wide. Standard-size products may also be capable of printing on small-format media.

Small Format: Products designed for media sizes smaller than those defined as Standard (e.g., A6, 4”x6”, microfilm), including those designed to accommodate continuous-form media less than 210 mm wide.

Model means the commercial description of the make, type, and if available and appropriate, variant and version of a fax machine or printer/fax combination.

Off Mode means the power state that the product enters when it has been manually or automatically switched off but is still plugged in and connected to the mains. This mode is exited when stimulated by an input, such as a manual power switch or clock timer to bring the unit into Ready Mode. When this state is resultant from a manual intervention by a user, it is often referred to as Manual Off, and when it is resultant from an automatic or predetermined stimuli (e.g., a delay time or clock), it is often referred to as Auto-off.

Participants means the manufacturers, importers or the dealers of fax machines or printer/fax combinations who are participating in the scheme.
Product speed means, Standard-sized products (a single A4 or 8.5”x11” sheet) printed/copied/scanned on one side in a minute is equal to one image-per-minute (ipm). If the maximum claimed speeds differ when producing images on a single A4 or 8.5”x11” paper, the higher speed shall be used.

- For Small-format products, a single A6 of 4”x6” sheet printed/copied/scanned on one side in a minute is equal to 0.25 ipm.
- For Large-format products, a single A2 is equivalent to 4 ipm and one A0 sheet is equivalent to 16 ipm.
- For continuous-form products categorized as Small-format, Large-format, or Standard-size, print speed in ipm should be obtained from the product’s maximum marketed imaging speed in meters per minute according to conversion below:

\[ X \text{ ipm} = 16 \times ([\text{Maximum media width}(\text{meters}) \times \text{Maximum imaging speed (length, meters/minute})]) \]

In all cases, the converted speed in ipm should be rounded to nearest integer.

**printer/fax combination (or printer/fax combination device)** means a machine, manufactured as a standard model, that serves as both a fully-functional printer and fax machine. Here a “printer” is defined as a machine that is capable of receiving printing information from a computer or from networked computers and produces hardcopy outputs accordingly. The unit must be capable of being powered from a socket outlet, and should be marketed and sold as a printer/fax combination, and is not equipped with a scanning table.

**rated frequency** means the frequency shown on the nameplate of the product.

**rated voltage** means the voltage shown on the nameplate of the product.

**Ready Mode** means the condition that exists when the product is not producing output, has reached operating conditions, has not yet entered into any lower-power modes, and can enter Active Mode with minimal delay. All product features can be enabled in this mode, and the product must be able to return to Active Mode by responding to any potential input options designed into the product. Potential inputs include external electrical stimulus (e.g., network stimulus, fax call, or remote control) and direct physical intervention (e.g., activating a physical switch or button).

**recognized laboratory** means a laboratory that complies with the requirements as stated in Section 8 and is acceptable to the Authority for carrying out tests and issuing test reports for fax machines and printer/fax combinations.
**scheme** means the Hong Kong Voluntary Energy Efficiency Labelling Scheme for Fax Machines.

**Sleep Mode** means the reduced power state that the product enters automatically after a period of inactivity. In addition to entering Sleep Mode automatically, the product may also enter this mode 1) at a user set time-of-day, 2) immediately in response to user manual action, without actually turning off, or 3) through other, automatically-achieved ways that are related to user behaviour. All product features can be enabled in this mode and the product must be able to enter Active Mode by responding to any potential input options designed into the product; however, there may be a delay. Potential inputs include external electrical stimulus (e.g., network stimulus, fax call, remote control) and direct physical intervention (e.g., activating a physical switch or button). The product must maintain network connectivity while in Sleep Mode, waking up only as necessary.

**Solid Ink (SI)** means a marking technology where the ink is solid at room temperature and liquid when heated to the jetting temperature. Transfer to the media can be direct, but is most often made to an intermediate drum or belt and then offset printed to the media.

**Standby Mode** means the lowest power consumption mode which cannot be switched off (influenced) by the user and that may persist for an indefinite time when the product is connected to the main electricity supply and used in accordance with the manufacturer’s instructions (Reference is drawn to IEC62301:2005 for measurement of standby power.). Standby Mode is the product’s minimum power mode.

**Stencil** means a marking technology that transfers images onto the print media from a stencil that is fitted around an ink drum.

**Typical Electricity Consumption (TEC)** means a method of testing and comparing the energy performance of imaging equipment products, which focuses on the typical electricity consumed by a product while in normal operation during a representative period of time. The key criteria of the TEC approach for imaging equipment is a value for typical weekly electricity consumption, measured in kilowatt-hours (kWh).
Test Image means a test image is Test Pattern A from ISO/IEC standard 10156:1999. It should be rendered in 10 point size in a fixed-width Courier font (or nearest equivalent); German-specific characters need not to be reproduced if the product is incapable of doing so. The image shall be rendered on A4 or 8.5” x 11” sheet of paper. For fax machines that can interpret a page description language (PDL), images shall be sent to the product in PDL.

Thermal Transfer (TT) means a marking technology where the desired hard copy image is formed by depositing small drops colorant (usually colour waxes) in a melted/fluid state directly to the print media in a matrix manner. TT is distinguish from U in that the ink is solid at room temperature and is made fluid by heat.

5. Technical Standards

5.1 All fax machines shall follow the TEC requirements except ink Jet fax machines which shall follow the OM requirements.

Typical Electricity Consumption (TEC) Requirements

5.2 The power rating of a fax machine model (or base unit) at various product speeds for TEC shall qualify according to the corresponding specifications as shown in Table 1.

Table 1: Maximum Allowable TEC for Fax Machine

<table>
<thead>
<tr>
<th>Colour Fax Machines</th>
<th>Product Speed (ipm)</th>
<th>Maximum TEC (kWh/week)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>≤ 32</td>
<td>(0.10 kWh/ipm)x + 2.8 kWh</td>

<tr>
<td></td>
<td>40 &lt; x ≤ 82</td>
<td>(0.35 kWh/ipm)x – 10.3 kWh</td>
</tr>
<tr>
<td></td>
<td>&gt; 82</td>
<td>(0.70 kWh/ipm)x – 39.0 kWh</td>
</tr>
</tbody>
</table>

Note: x = Monochrome Product Speed (ipm).
5.3 For fax machine with a Type 2 DFE, the energy consumption of the DFE should be excluded when comparing the product’s measured TEC value to the criteria listed in Table 1. The DFE must not interfere with the ability of the multifunction device to enter or exit its lower-power modes. In order to take advantage of this exclusion, the DFE must meet with the definition in Section 4 and be a separate processing unit that is capable of initiating activity over the network.

**Operation Mode (OM) Requirements**

5.4 For fax machine with a functionally-integrated DFE that relies on the imaging product for its power, the power consumption of the DFE should be excluded when comparing the product’s measured Sleep Mode power to the combined marking-engine and functional-adder criteria limits below and when comparing the measured Standby Mode power to the Standby criteria limits below. The DFE must not interfere with the ability of the imaging product to enter or exit its lower-power modes. In order to take advantage of this exclusion, the DFE must meet the definition and be a separate processing unit that is capable of initiating activity over the network.

**Operation Mode (OM) Default Time Requirement**

5.5 The default time to Sleep Mode of a multifunction device model (or base unit) at various speeds shall qualify according to the corresponding specifications as shown in Table 2.

<table>
<thead>
<tr>
<th>Product Speed In Images Per Minute (ipm)</th>
<th>Fax Machines (minutes)</th>
<th>Printer / Fax Combinations (minutes)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ipm ≤ 10</td>
<td>5</td>
<td>5</td>

<td>5</td>
<td>30</td>
</tr>
<tr>
<td>ipm &gt; 30</td>
<td>5</td>
<td>60</td>
</tr>
</tbody>
</table>

5.6 All fax machine must be shipped with a maximum default time less than or equal to 4 hours, which is only adjustable by the manufacturer. This maximum machine delay time cannot be influenced by the user and typically cannot be modified without internal, invasive product manipulation. The default time settings provided in Table 2 may be user adjustable.

5.7 When reporting data and qualifying products that can enter Sleep Mode in multiple ways, manufacturers should reference a Sleep level that can be reached automatically. If the product is capable of automatically entering multiple, successive Sleep levels, it is at the manufacturer’s discretion which of these levels is used for qualification purposes; however, the default-delay time provided must correspond with whichever level is used.

**Operation Mode (OM) Sleep Mode Power Consumption**

5.8 Measured Sleep Mode power consumption shall be less than or equal to 1.4W.
Operation Mode (OM) Standby Mode Requirements

5.9 Standby Mode power, which is the lesser of the Ready Mode Power, Sleep Mode Power, and Off Mode Power, shall be less than or equal to the Maximum Standby Mode power requirement, 1 W.

Safety Requirements

5.10 All materials and workmanship of the fax machines are also needed to comply with IEC 60950, Information Technology Equipment – Safety’’ requirements and/or the Electrical Products (Safety) Regulation of the HKSAR, where applicable.

6. Test Methods

General

6.1 All test methods specified in this document are only related to checking compliance with the TEC, OM and general performance requirements. It is not the intention of this document to detail out the test standards and requirements for checking compliance with the Electrical Products (Safety) Regulation of the HKSAR. The participant should conduct appropriate tests, where necessary, in addition to those specified in this document in order to comply with the requirements stipulated in the aforesaid Electrical Products (Safety) Regulation.

Compliance with Safety Requirements

6.2 The testing standards for checking compliance with the safety requirements are based on IEC 60950, Information Technology Equipment - Safety. For detailed requirements and procedural descriptions one should refer to the respective standard.

6.3 To the extent that definitions in the IEC standard do not conflict with the definitions of this document, the definitions in the aforesaid standard shall be included.

Test Conditions

6.4 For all fax machines and printer/fax combinations, the test conditions shall be as follows:

(a) Electrical supply 220V ± 5%;
(b) Frequency 50Hz ± 1%;
(c) Line impedance < 0.25 ohm;
(d) Total harmonic distortion < 2% (voltage);
(e) Test room temperature 25 °C ± 3 °C;
(f) Test room relative humidity 10% to 80%;
(g) Test Paper A4, 80g/m²
Test Equipment

6.5 A power meter (or energy analyzer) shall be used to measure the energy consumption of the photocopier under test. The power meter shall be capable of reading the energy drawn by the photocopier without disrupting the electrical power supply.

6.6 The power meter should have a frequency response of at least 3 kHz and should provide resolution for corresponding measurement values listed in Table and accuracy of ± 5% (For measurements of 0.5 W or less, the required accuracy is 0.02W). In addition, the meter should be capable of reading the current drawn by the photocopier without causing internal peak distortion (i.e. clipping off the top of the current wave). The use of a power meter with higher crest factors and more current range choices should be preferred.

<table>

<td>1W</td>
</tr>
<tr>
<td>&gt;1.5kW</td>
<td>10W</td>
</tr>
</tbody>
</table>

*Note:* $x = \text{Measurement Values}$

6.7 Time measurements may be performed with an ordinary stopwatch with resolution of at least 1 second.

Testing Procedure of TEC

6.8 For details please refer to Annex 1.

Testing Procedure of OM

6.9 For details please refer to Annex 2.

7. Energy Label

A self-adhesive label should be used.

Label Location

7.1 The label should be affixed to the appliance at a prominent location and should be easily visible. The participant should ensure that the label appears on every registered appliance on display, sale or hire.
Colour Scheme & Dimensions

7.2 The label should be printed on self-adhesive paper or material that is approved by the Director used with white-coloured background and should have colour schemes and dimensions as shown in Annex 3. It should be printed in English and in Chinese. Soft copy of this label can be obtained from Energy Efficiency Office, Electrical and Mechanical Services Department.

Label Quality

7.3 The paper or material that is approved by the Director used for the label should be durable and possess good wear and tear characteristics. It should stick tightly on the appliance and can be removed easily when needed.

Information on the Label

7.4 The information that appears on the label should accord to the label format and meanings as indicated in the Annex 3.

8. Testing Facilities, Laboratories and Accreditation Bodies

8.1 The Authority will accept the results and certificates issued by the test laboratory, which fulfills one of the following criteria as specified in Clause 8.2 & 8.3 or 8.4.

8.2 The laboratory is accredited by the Hong Kong Accreditation Service (HKAS) for the relevant test under the Hong Kong Laboratory Accreditation Scheme (HOKLAS) or a scheme with which HKAS has concluded a mutual recognition agreement (see Note); and the results are issued in a test report or certificate bearing the accreditation mark.

8.3 The laboratory is accredited to GB25956-2010 “Minimum allowable values of energy efficiency and energy grade for printers and fax machines” or IEC 62301 (First Edition 2005-06) 1.0 “Household Electrical Appliances – Measurement of Standby Power” or U.S. Environmental Protection Agency “Energy Star Laboratory for Imaging Equipment”.

The Hong Kong Voluntary Energy Efficiency Labelling Scheme for Fax Machines
8.4 The Authority will also consider the following arrangements:

(a) Self-certification by original manufacturers that the operations of their in-house laboratories satisfy the requirements of ISO/IEC 17025; and

(b) The manufacturers are currently operating according to a recognized international quality system (such as ISO 9001); and

(c) The manufacturer’s in-house laboratories had been successful in carrying out energy consumption tests on office equipment and where these tests had been evaluated and certified by internationally recognised independent certification organisations.

8.5 The internationally recognised independent certification organizations mentioned in Clause 8.3 shall meet the following minimum requirements:

(a) Being recognized internationally to be competent for certifying product energy efficiency performance tests; and

(b) Having experience in assessing and certifying the relevant energy efficiency performance tests; and

(c) Having well established assessment procedures, including staff training and assessment criteria, relating to assessment and certification of energy efficiency performance tests.

**Note:** HKAS has concluded mutual recognition arrangements with overseas accreditation bodies for testing laboratory accreditation. The list of mutual recognition arrangement partners may change from time to time and the up-to-date list is available from the HKAS website of www.info.gov.hk/itc/hkas. Partners to these arrangements recognise the accreditations granted by one another as equivalent.

9. **Registration and Participation**

**Registration Procedures**

9.1 All manufacturers, importers and the other parties involved in the product distribution network are welcomed and encouraged to participate in the scheme. For some known manufacturers and importers, invitation letters will be issued to them. However, any
party may submit their applications for registration no matter whether they are invited or not.

9.2 The proforma letter of invitation is shown in Annex 4.

9.3 Applicant should submit formal application to

Chief Engineer / Energy Efficiency A
Energy Efficiency Office
Electrical and Mechanical Services Department
3 Kai Shing Street
Kowloon, Hong Kong

by means of an application letter through mail, facsimile or electronic mail. In order to ensure effective implementation of the scheme, the applicant must be committed to fully comply with the duties, responsibilities and obligations set out in this scheme. The proforma letter of application as shown in Annex 5 details the aforesaid obligations and should be used for application. To facilitate the application process, the application form can be downloaded from EMSD website.

Information / Documents to be Submitted for Registration

9.4 Each make and model of a product participating in the scheme should be provided with a test report issued by a recognized laboratory. The test report should contain results of the power consumption test.

9.5 Details of the general and technical information to be submitted together with the application are listed as follows:

(a) information about the company
   name, address, telephone number, Fax, email address, contact person, importer, distributor, etc.;

(b) products to apply for participating in the scheme
   names of products, types, brand names, model references, countries of origin, etc.;

(c) parties that will be responsible for making and fixing the energy labels

(d) commencement date to affix energy label on product

(e) documentary proof that the product(s) complies with the Electrical Products (Safety) Regulation of the HKSAR

(f) detailed test reports shall provide at least the following relevant technical data on the appliances:
   - Monochrome Product Speed;
   - Typical Electricity Consumption (if applicable);
   - Default Delay Time to Sleep (if applicable);
9.6 Company's name and chop should be stamped on all the documents provided. All photocopies of test reports submitted to the Authority shall be certified true copies by an appropriate organization.

Acceptance of Registration

9.7 On receipt of the application, the Authority will verify whether the product meets the energy efficiency requirements based on the submitted data. The accuracy of the submitted data, their inconsistencies and non-compliance will be dealt with in accordance with Section 11.

9.8 If the application is accepted, the participant will be notified of the result within 17 working days upon receipt of all necessary information requested. The participant will then be allowed to affix the energy labels onto the 'registered' products. Both manufacturer and importer of the registered product should ensure that the energy label is correctly printed and affixed on the fax machine in accordance with Section 7. The proforma letter of acceptance is shown in Annex 7.

9.9 If the application is rejected, the notification letter as shown in Annex 8 will also be given within 17 working days upon receipt of all necessary information requested.

9.10 The flow chart for registration is shown in Annex 9.

Participant’s Duties, Responsibilities and Obligations

9.11 The participant is obliged to:

(a) submit application and information including test results in accordance with format and procedures set out in Section 9.3 – 9.6;
(b) conduct tests via recognized laboratories and to comply with the specified test methodology;
(c) produce and affix energy labels at his own costs;
(d) fully inform other sales agents in his distribution network once the particular make and model of a product is registered under this scheme;
allow random/ad-hoc inspection to be conducted by persons authorized by the
Authority on registered products at his premises;
conduct re-test(s) at his own costs at some recognized laboratories, if
non-compliance is found on his products. The result of re-test(s) shall reach the
Authority within the prescribed period of time specified by the Authority;
inform the Authority of any change in the technical information and data that
were previously submitted to the Authority together with the application letter;
accept the fact that if the product fails to perform in accordance with the
requirements as given in Sections 5 and 6 and this cannot be readily rectified,
the Authority may order it be de-registered from the scheme; and
remove all energy labels from products which have been de-registered
immediately.

9.12 The details of products registered under this scheme will be kept in a register
maintained by the Authority. The registration records will be regularly uploaded and
maintained in the EMSD internet for access by the public and interested parties, for
their information.

**Termination**

9.13 Under circumstances of poor performance such as:
(a) (repeated) failure to fulfill obligations set out under Section 9.11; or
(b) Once false or inaccurate or misleading information is given on a label; or
(c) in any other case where the Director is of the opinion that registration of a
product is contrary to the public interest
the Authority may de-register a product from the scheme with immediate effect by
giving the participant notice in writing. Once a product is de-registered, no one is
allowed to fix an energy label on it.

De-registration may occur even when there is no legal action taken under either the
Trade Descriptions Ordinance (Chapter 362) or the Copyright Ordinance (Chapter 528).

9.14 Participant who decides to discontinue participating in the scheme or to withdraw any
registered model from the registered product list shall give at least three months’
advance notice to the Authority.

**10. Legal Provisions**

10.1 This scheme is a voluntary scheme. However, a participant who abuses the scheme by
giving false information on a label may contravene provisions of the Trade Descriptions
Ordinance (Chapter 362).
10.2 No one could take advantage of the scheme by using the label on his product without authorization of the Authority as that may constitute an infringement of copyright under the Copyright Ordinance (Chapter 528).

11. **Compliance Monitoring and Inspection**

**Purpose**

11.1 To uphold credibility of the scheme and to maintain continuous confidence of the consumers, compliance check on energy labels on those products participating in the scheme are needed. Also to avoid the unsatisfactory situation that the non-participating parties taking advantage of the scheme by using unauthorized labels, the Authority may also carry out suitable form of inspection on those unregistered products which have not been registered under the scheme.

**Scope**

11.2 The scope of inspection includes sample checking and testing of the following items:

(a) whether energy label is in fact placed on the registered appliance;
(b) whether energy label on the registered appliance is in a prominent position;
(c) whether energy label being displayed is of correct format in accordance with Section 7;
(d) Whether the information on the energy label accords with record;
(e) Whether the registered appliance complies with the energy consumption and performance requirements;
(f) Whether the data submitted by the participants are correct by random re-testing; and
(g) Whether unregistered appliances display unauthorized energy labels.

11.3 The participants will be requested to take immediate remedial action and report the follow-up action taken if non-compliance is found on their products.

11.4 If a registered product is found not meeting the requirements specified in accordance with the technical standards stipulated in Section 5 during random testing (i.e. discrepancy between the registration data and test result is more than 10%), the Authority may request the participant to conduct separate performance tests at his own costs, in accordance with the test methodology as stated in Section 6 in one of the test laboratories agreed by the Authority. If non-compliance is confirmed and no remedial action is to be taken by the applicant, the Authority may order it be de-registered from the scheme. Failure to remove energy labels from the de-registered products after the Director has withheld his authorization for using such labels may contravene the relevant ordinances.
Inspecting Officers
11.5 The Authority will authorize inspecting officers to carry out product compliance monitoring and inspection. The officers will carry proper identification cards which will be produced during their inspection operations. However, the officers will not inform the participants in advance of their intended inspection operation.

11.6 It is the participants' duty to allow the inspecting officers to gain access to their premises to carry out inspection.

Mode of Inspection
11.7 Inspections will be carried out on registered products under the scheme on random basis. Based on the record of the registration, random inspection programmes will be developed.

11.8 In addition to the random inspections, the inspecting officers will carry out ad-hoc inspections in response to complaints. The items to be inspected in such a case will depend upon the nature of complaint and may include all types of inspection as stated in Section 11.2.

11.9 Inspections will normally be carried out at the retail outlets and showrooms. Where necessary, inspection will also be done at warehouses.

11.10 The inspection results will be properly recorded for future analysis as well as on evaluation of the effectiveness of the scheme.

12. Complaints and Appeal

12.1 The Authority will be responsible for dealing with complaints from participants and other parties against matters related to the scheme.

Complaints Handling Procedure
12.2 The Director shall ensure that complaints are properly recorded and handled without undue delay.

12.3 The Authority shall carry out preliminary investigation on complaints and reply to the complainants within a reasonable time. For complaints that require site inspection and laboratory test, the complainant shall be notified through an interim reply.
12.4 The Authority shall inform the complainant of the results or decisions made on the complaint.

**Appeal Procedure**

12.5 A participant who is aggrieved by a decision or action taken by the Authority may appeal to the Director in writing stating the reason for the appeal.

12.6 The Director may decide to suspend the decision or action given by the Authority from the day on which the appeal is made until such appeal is disposed of, withdrawn or abandoned unless such suspension would, in the opinion of the Director, be contrary to public interest.

12.7 The Director may by notice to the appellant require that appellant to attend meeting with him or his representatives and provide documents and give evidence relevant to the appeal.

12.8 The Director shall notify the appellant of his decision and reasons for it. The decision will be final and binding.

---

13. **Maintenance of the Scheme**

13.1 To ensure that the scheme can continue to operate effectively and efficiently after its introduction, a proper system of maintenance is needed.

13.2 The maintenance system consists essentially of:

(a) Continuous updating of the lists of participants in the scheme as follows:

   (i) registered products with details such as registration number in the scheme, date of registration or de-registration if it occurs, energy efficiency data, performance data, make, model and other related information; and

   (ii) registered importers, manufacturers, local agents etc. in the distribution network with details such as address, date of registration or de-registration if it occurs, etc.

(b) Periodic review of the test methodology, and procedures for application registration and compliance monitoring, etc., to bring them in line with the latest needs of the manufacturers, importers and retailers, etc.

(c) Continuous evaluation of the effectiveness of the scheme and assessment of what changes are necessary.
14. **Future Development**

14.1 It is hoped that following implementation of the scheme, the market will phase out models of low efficiency and public awareness of using energy efficient products will be improved.

14.2 To further facilitate the public in choosing energy efficient appliances and raise public awareness on energy saving, the Government has introduced a mandatory Energy Efficiency Labelling Scheme (EELS) through the Energy Efficiency (Labelling of Products) Ordinance.
Testing Procedure of Typical Electricity Consumption (TEC)

Job Structure

A1.1 For the purposes of TEC test procedure, the speed of the product that is used to determine the job size for the test shall be the manufacturer’s reported maximum claimed simplex speed for making monochrome images on standard-sized paper (A4 or 8.5”x11”), rounded to nearest integer.

A1.2 The number of images per job shall be calculated according to the following three steps:

1. Calculate the number of jobs per day. The number of jobs per day varies with Product Speed:
   - For units with a speed of 8 ipm or less, use 8 jobs per day.
   - For units with a speed between 8 ipm and 32 ipm, the number of jobs per day is equal to the speed. For example, a 14 ipm unit shall use 14 jobs per day.
   - For units with a speed of 32 ipm and above, use 32 ipm jobs per day.

2. Calculate the nominal amount of images per day from Table A. For example, a 14 ipm unit shall use $0.5 \times 14^2 = 98$ images per day

3. Calculate the number of images per job by dividing the number of images per day by the number of jobs per day. Round down (truncate) to nearest integer.

A1.3 For fax machines with a product speed of 20 ipm, there shall be done one original per required image. Jobs with a product speed of 20 ipm and above may make multiple copies of each original as long as the number of originals is at least ten.

Table A – Imaging Equipment Job Table

<th>Rating to use</th>
<th>Formula (images per day)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monochrome</td>
<td>monochrome speed</td>
<td>$0.5 \times ipm^2$</td>
</tr>
<tr>
<td>Colour</td>
<td>monochrome speed</td>
<td>$0.5 \times ipm^2$</td>
</tr>
</tbody>
</table>
Measurement procedures

A1.4 To measure time, an ordinary stopwatch and timing to a resolution of one second is sufficient. All energy figures are to be recorded as watt-hours (Wh). All time data is to be recorded in seconds or minutes. “Zero meter” references are to the “Wh” readout of the meter.

A1.5 Service/maintenance modes (including colour calibration) should generally not be included in TEC measurements. Any such modes that occur during the test shall be noted. If a service mode occurs during a job other than the first, that job may be dropped and a substitute job added to the test. In the case a substitute job is needed, do not record the energy values for the dropped job and add the substitute job immediately after Job 4. The 15-minute job interval shall be maintained at all times, including for the job that is dropped.

Measurement parameters

A1.6 Photocopier models shall be tested in simplex mode. Originals for copying shall be simplex images.

A1.7 Colour-capable fax machine models shall be tested making monochrome images unless incapable of doing so.

A1.8 The photocopier model shall be configured as shipped and recommended for use, particularly for key parameters such as power-management default-delay times and resolution.

A1.9 Photocopier models that are capable of being network connected as shipped shall be connected to the network.

Measurement procedure

A1.10 The measurement procedure for fax machines is as follows:

<table>
<thead>
<tr>
<th>Step</th>
<th>Initial State</th>
<th>Action</th>
<th>Record (at end of step)</th>
<th>Unit of Measure</th>
<th>Possible States Measured</th>
</tr>
</thead>
<tbody>
<tr>

<td>Final Energy</td>
<td>Watt-hour (Wh)</td>
<td>Ready, Sleep</td>
</tr>
</tbody>
</table>
units show that unit has entered Sleep Mode or the final Sleep Mode for units with multiple Sleep modes, or 4 hours.

**Notes:** Before beginning the test, it is helpful to check the power management default-delay times to ensure they are as-shipped, and to confirm that there is plenty of paper in the device.

"Zero meter" references may be accomplished by recording the accumulated energy consumption at that time rather than literally zeroing the meter.

**Figure 1 - TEC Measurement Procedure**

Figure 1 shows a graphic form of the measurement procedure. Note that products with short default-delay times may include periods of Sleep within the four job measurements, or Auto-off within the Sleep measurement in the Step 4. Also, print-capable products with just one Sleep mode will not have a Sleep mode in final period. Step 10 only applies to MFD without print-capability.

**Calculation methods**

1.7 Calculations of TEC are based on imaging jobs being in two clusters each day with the unit going to its lowest power mode in between (as during a lunch break), as illustrated in Figure 2. It is assumed that weekends have no usage and no manual switching-off is done.
Figure 2 shows a schematic example of eight-ipm fax machine that performs four jobs in morning, four jobs in afternoon, has two “final” periods and an Auto-off mode for the remainder of the workday and all of the weekend. An assumed “lunchtime” period is implied but not explicit. The figure is not drawn to scale. As shown, jobs are always 15 minutes apart and in two clusters. There are always two full “final” periods regardless of the length of these periods.

A1.8 Final Time is the period of time from the last job being initiated to the start of the lowest power mode (Sleep for fax machines) minus the 15-minute job interval time.

A1.9 The following two equations are used for all product types:

\[
\text{Average Job Energy} = \frac{(\text{Job2} + \text{Job3} + \text{Job4})}{3}
\]

\[
\text{Daily Job Energy} = (\text{Job1x2}) + [(\text{Jobs per day} - 2) \times \text{Average Job Energy}]
\]

A1.10 The calculation method for fax machines also uses the following three equations:

\[
\text{Daily Sleep Energy} = [24 \text{ hours} - ((\text{Job per day}/4) + (\text{Final Time} \times 2))] \times \text{Sleep Power}
\]

\[
\text{Daily Energy} = \text{Daily Job Energy} + (2 \times \text{Final Energy}) + \text{Daily Sleep Energy}
\]

\[
\text{TEC} = (\text{Daily Energy} \times 5) + (\text{Sleep Power} \times 48)
\]

A1.11 The specifications of the metering equipment and ranges used in each measurement shall be reported. Measurements must be conducted so as to result in a potential error of the TEC value of no more than 5%.
Testing Procedure of Operation Mode (OM)

B1.1 Measurement of OM power and delay times shall be conducted according to the Table B, subject to the following provisions:

a) All power figures shall be recorded in watts (W) in accordance with IEC 62301(First Edition 2005-06) 1.0, unless otherwise specified in this document.

b) The accuracy requirement for this OM test procedure is 2% for all measurements except for Ready power, where it is 5%.

c) To measure time, an ordinary stopwatch and timing to a resolution of one second is sufficient. All power figures are to be recorded in watts (W).

d) Service/maintenance modes (including colour calibration) generally should not be included in measurements. Any adaptation of the procedure needed to exclude such modes that occur during the test shall be noted.

</tr>
<tr>
<td>9</td>
<td>Off</td>
<td>Measure Off power. (If no manual on-off switch, note and measure Sleep Mode power).</td>
<td>Off power</td>
<td>Watts (W)</td>
</tr>
</tbody>
</table>

Notes: Step 1 — If the unit has no Ready indicator, use the time at which the power consumption level stabilizes to the Ready level, and note this detail when reporting the product test.
Steps 4 & 5 – For products with more than one Sleep level, repeat these steps as many times as necessary to capture all successive Sleep levels and report this data. Two Sleep levels are typically used in large-format photocopiers and MFDs that use high-heat marking technologies. For products lacking this Mode, disregard Steps 4 and 5.

Steps 4 & 6 – Default-delay time measurements are to be measured in parallel fashion, cumulative from the start of Step 4. For example, a product set to enter a Sleep level in 15 minutes and enter a second Sleep level 30 minutes after entering the first Sleep level will have a 15-minute default-delay time to the first level and a 45 minute default-delay time to the second level.

B1.2 The eligibility criteria in Clause 5.8 (i.e. less than or equal to 1.4W) address the marking engine of the product. Since products are expected to be shipped with one or more functions beyond a basic marking engine, the corresponding allowances below should be added to the marking engine criteria for Sleep. The total value for the base product with applicable “functional adders” should be used to determine eligibility. Manufacturers may apply no more than three Primary functional adders to each product model, but may apply as many as Secondary adders as present (with Primary adders in excess of three included as Secondary adders).

</tbody>
</table>

---

**B1.3** For the adder allowances shown in Table C, distinctions are made for “Primary” and “Secondary” types of adders. These designations refer to the state in which the interface is required to remain while the imaging product is in Sleep. Connections that remain active during the OM test procedure while the imaging product is in Sleep are defined as Primary, while
connections that can be inactive while the imaging product is in Sleep are defined as Secondary. Most functional adders typically are Secondary types

B1.4 Manufacturers should consider only the adder types that are available on a product in its as-shipped configuration. Options available to the consumer after the product is shipped or interfaces that are present on the product’s externally-powered digital front-end (DFE) should not be considered when applying allowance to the imaging product.

B1.5 For products with multiple interfaces, these interfaces should be considered as unique and separate. However, interfaces that perform multiple functions should only be considered once.
Energy Label Format

Soft copies of these labels can be obtained from Energy Efficiency Office, Electrical and Mechanical Services Department.
Dear Sir/Madam,

Invitation of Application for Registration to Participate in Voluntary Energy Efficiency Labelling Scheme for Fax Machines

Having gone through the necessary consultations and duly considered the views from various concerned parties, the government has decided to introduce a voluntary energy efficiency labelling scheme for fax machines to Hong Kong with effect from (__________________). The details of the scheme have been finalized and I enclose herewith a guide of the scheme for your reference.

Being one of the major fax machines manufacturers / importers / agents in Hong Kong, you are invited to participate in the scheme so as to take part in promoting public awareness in energy conservation and environmental improvement to Hong Kong. If you are interested in participating in the scheme, please apply in accordance with the proforma letter of application (Annex 5) and submit details including technical information in accordance with the attached Annex 6 to the ‘Chief Engineer / Energy Efficiency A’ at the following address.

Energy Efficiency Office
Electrical and Mechanical Services Department
3 Kai Shing Street
Kowloon, Hong Kong

Please be reminded to submit accurate test data to support your application. Under this scheme, routine compliance monitoring and checking will be performed and if a registered product is found to be non-compliant, we may consider deregistering the product from the scheme.

Should you need further clarification or information, you are most welcome to contact the undersigned or Mr. ____________ , at the telephone number ________.

Yours faithfully,

for Director of Electrical & Mechanical Services

(Note: ¹ ‘scheme’ means ‘The Voluntary Energy Efficiency Labelling Scheme for Fax Machines’
² delete as appropriate)
Dear Sir/Madam,

Application for Registration to Participate in 
Voluntary Energy Efficiency Labelling Scheme for Fax Machines

Our company is the (manufacturer/importer/agent*) of ___________________ in Hong Kong. We support the introduction of the labelling scheme to Hong Kong and would like to be one of the participants in the scheme to promote energy efficiency.

I understand fully the obligations and duties stated in the scheme and will comply with all relevant requirements, in particular those specified below:

i) conduct tests via recognized laboratories and to comply with the specified test standards;

ii) produce and affix specified energy labels at my own costs;

iii) allow random/ad-hoc inspection to be conducted by persons authorized by the issuing Authority on registered products at my premises;

iv) conduct re-test(s) at my own costs at some recognized laboratories, if the results of inspection suggest inaccurate energy label information being displayed. The result of re-test(s) shall reach the Authority within the prescribed period of time specified by the Authority;

v) inform the Authority of any change in the technical information and data that were previously submitted to the Authority together with the application letter; and

vi) accept the fact that if a product fails to perform in accordance with the required energy efficiency standards and performance as given in Section 5 and this cannot be readily rectified, the Authority may order it be de-registered from the scheme.

The details of information of those appliances which we intend to register with the Authority are shown in the attached document, (Annex 6) and are submitted herewith for your vetting.

Yours faithfully,

(Manufacturer/Importer/Agent ‘s Name and Company Chop)

* delete as appropriate
Information to be Submitted to Energy Efficiency Office

1. Information about the company:
   Name, Address, Telephone number, Fax, E-mail address, Contact person, Importer, Distributor, etc.

2. Products covered by the application:
   Name of products, types, make, model references, countries of origin

3. Parties which will be responsible for making and fixing the Energy Label

4. Commencement date to affix energy labels on products

5. Detailed test reports providing at least the following relevant technical data for the product:
   (a) Monochrome Product Speed;
   (b) Typical Electricity Consumption (if applicable);
   (c) Default Delay Time to Sleep (if applicable);
   (d) Sleep Mode Power Allowance (if applicable);
   (e) Maximum Standby Power (if applicable).

6. Manufacturer declared maximum speed of product:
   ◆ Monochrome / Colour Print Speed (if applicable);
   ◆ Monochrome / Colour Fax Speed (if applicable);

7. Documentary proof that the product complies with the Electrical Products (Safety) Regulation of the Hong Kong Special Administrative Region.

Note: Company’s name and chop should be stamped on all documents provided. All photocopies of test reports submitted to the office should be certified true copy by appropriate organization.
Proforma Letter of Acceptance

Date

Dear Sir/Madam,

Acceptance of Application for Registration to Participate in Voluntary Energy Efficiency Labelling Scheme for Fax Machines

With reference to your letter of ref.________________dated ______________, I am pleased to inform you that your application to participate in the captioned scheme has been accepted.

I enclose herewith the registration certificates of fax machine (or printer/fax combination) registered. The registered products are as follows:

<table>
<thead>

You are allowed to affix a specified energy label onto each and every product registered under the scheme. The contents of the energy label should be based on the information that you have provided in your application ref.__________ and dated __________.

The registration certificates of the registered appliances are ready for collection at this office.

Should you have any queries regarding the scheme, please contact this office.

Yours faithfully,

for Director of Electrical & Mechanical Services
