1. **Purpose**

This set of document is intended to give a general description on the Hong Kong Voluntary Energy Efficiency Labelling Scheme for Induction Cookers.

2. **Background**

   **The Nature of Energy Efficiency Labelling Scheme**

2.1 The Energy Efficiency Labelling Scheme (EELS) is an energy conservation initiative that the Government of the Hong Kong Special Administrative Region (HKSAR) has adopted. Under the scheme, some common types of appliances will incorporate an energy label that serves to inform consumers of the product's energy consumption and efficiency. Consumers should then be able to take those factors into account and make their purchasing decision.

   **Objectives of Energy Efficiency Labelling Scheme**

2.2 The concept of EELS has been developed and implemented in several forms and in different stages of development. In some countries, it is a compulsory requirement for certain kinds of appliances to be provided with an energy label. The labelling requirements may apply to equipment such as household refrigerators / freezers, washing machines, room coolers, clothes dryers, electronic ballast, etc. The EELS generally aims to achieve the following:

   - greater public awareness of energy conservation and environmental improvement needs;
   - provision of readily available, pre-purchase information on energy consumption and efficiency data, where applicable, to enable ordinary consumers to select more energy efficient products;
   - stimulation to the manufacturers/market for phasing out less energy efficient models; and
   - actual energy savings and environmental improvements.
2.3 Hong Kong also aims at achieving the above objectives and the Hong Kong Voluntary EELS now covers twenty two types of household appliances and office equipment. Thirteen types of which are electrical appliances and seven types of office equipment. There are also two types of gas appliance for domestic gas instantaneous water heaters and gas cookers. The scope of EELS has also been extended to cover petrol passenger cars.

3. **Scope**

3.1 The scheme will only apply to the manufacturers and importers (local agents, retailers and the related parties) who have participated in the voluntary scheme.

3.2 The scheme commenced on 24 July 2012. The revision of the scheme has been implemented from 1 January 2015 and will expire on **31 December 2017** when re-registration is necessary.

3.3 The scope of application covers all new registered appliances imported to or manufactured in Hong Kong with effect from the date that is declared by the participant but does not cover second-hand products, products already in existing use, under trans-shipment or manufactured for export, etc.

3.4 The scheme will be operated as a ‘Recognition Type’ labelling system. All appliances will be recognised and registered provided that they can meet certain energy efficiency and performance requirements as stipulated in the scheme.

3.5 The provisions of this scheme shall apply to cookers using electromagnetic induction heating as heating source with rated power consumption range from **700W** to **2800W**.

3.6 The scheme does not cover (i) induction cookers for commercial use, (ii) industrial frequency induction cookers (i.e. using 50Hz for electromagnetic induction heating) and (iii) concave stove.
4. Definitions

Unless otherwise specified, the following definitions shall apply throughout this document:

Authority means the Electrical & Mechanical Services Department, the Government of the Hong Kong Special Administrative Region (HKSAR).

Director means the Director of Electrical & Mechanical Services Department, the Government of the Hong Kong Special Administrative Region.

Government means the Government of the Hong Kong Special Administrative Region.

Heating Unit means the induction cooker’s countertop containers that can be placed, and has a fully functional part of the independent heating.

inspecting officer means the officer authorized by the Director to carry out inspection on appliances.

Induction cooker means an appliance used to cook by means of eddy current.

label means the energy label as described in Section 7 of this document.

participant means the manufacturers, importers or the retailers of appliance participating in the scheme.

rated frequency means the frequency marked on the nameplate or declared as such by the manufacturer or responsible distributor for the induction cooker.

rated voltage means the voltage marked on the induction cooker.

rated wattage means the wattage marked on the induction cooker.
Recognized laboratory means a laboratory that compiles with the requirements as stated in Section 8 of this document and is acceptable to the Authority for carrying out tests and issuing test reports on induction cookers.

Scheme means the Hong Kong Voluntary Energy Efficiency Labelling Scheme for Induction Cookers.

Thermal efficiency (%) means the ratio of the heat received in the induction cooker at a given time to the power input to the induction cooker.

---

5. Technical Standards

Thermal Efficiency Requirement

5.1 The thermal efficiency of induction cooker shall be equal to or greater than the value shown in Table 1 below.

<table>
<thead>
<tr>
<th>Rated Power (W)</th>
<th>Thermal Efficiency (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤ 1200</td>
<td>86</td>
</tr>
<tr>
<td>&gt; 1200</td>
<td>88</td>
</tr>
</tbody>
</table>

Standby Power Consumption Requirement

5.2 If the standby function is available in any induction cooker, the standby power consumption of the induction cooker shall not exceed the values shown in Table 2 below.

<table>
<thead>
<tr>
<th>No. of Heating Unit</th>
<th>Standby Power Consumption (W)</th>

</tr>
</tbody>
</table>
**Rated Wattage Requirement**

5.3 Rated wattage and wattage of the actual test shall not exceed ± 5%.

**Standard Pot Requirement**

5.4 Standard pot body and lid size shown in Figure 1 and Figure 2.

5.5 Standard pot technical requirements:-
(a) pot and lid made of carbon steel Q235 according to GB 700-88, the carbon mass
fraction of < 0.08%;
(b) lid material of 1mm thick, the thickness of pot body as denoted by “t” in Figure 2;
(c) the bottom of pot body is not convex, the maximum concavity of the bottom of pot
not exceeding 0.6% times of the effective diameter;
(d) the surface of pot lid and body should be smooth and be sand-blasted to prevent
rusting; and
(e) the effective bottom diameter logo shall be displayed on the outside of the pot.

6. **Test Methodology & Standards**

**General**

6.1 All test standards and specifications specified in this document are only related to checking compliance with the energy efficiency and general performance requirements. It is not the intention of this document to detail out the test standards and requirements for checking compliance with the Electrical Products (Safety) Regulation of the HKSAR. The participant shall conduct appropriate tests, where necessary, in addition to those specified in this document in order to obtain Certificates of Safety Compliance for his appliances.

**Compliance with Safety Requirements**

6.2 In addition to the performance requirements, all induction cookers shall comply with the Electrical Products (Safety) Regulation, Chapter 406G of the Laws of Hong Kong, and the safety standards specified under the Regulation, and all other legislations concerning the safety of induction cookers.

**Measurement of Thermal Efficiency**

6.3 The aforementioned requirements tests in Section 5 shall be carried out according to the test methods as specified in GB 21456 – 2014 “Minimum Allowable values of energy efficiency and energy efficiency grades for household induction cookers”. If there is more than one heating unit in the induction cooker, tests should be conducted for each heating unit of the induction cooker according to Section 6. All the test results must be in compliance with Section 5 requirements.

**Test Conditions**

6.4 During the test described in Section 6.3, the induction cooker tested at a voltage of 220V ±1% and a frequency of 50Hz ± 1 Hz. Unless the Director approves, the following test conditions must be comply with.

(a) relative humidity : 45 % ~ 85 %

(b) atmospheric pressure : 86 kPa ~ 106 kPa

(c) ambient temperature : 20 °C ± 2 °C and without influence of air flow and heat radiation in the test venue.
Test Method for Thermal Efficiency

6.5 The test shall be conducted under specified test conditions. The standard pot used for the test shall satisfy the requirements and the size specifications in Section 5, and can cover a heated area of the minimum specification (standard diameter larger than the effective diameter of bottom coil plate). Measure the total mass of lid and body (m2). Place the pot on the cold test centre induction heating unit, add mass of water (m1) as specified in Table 3 to the pot. The initial water temperature shall be 15 °C ± 1 °C. Cover pot with lid. Put a thermometer into the centre of the pot through the lid hole, with the mercury part dipped in water 10 mm above the bottom of the pot. Read the thermometer reading (t1), start the cooker and quickly adjusted to the maximum heating mode. When the thermometer temperature is nearing 75K, switch off the cooker, record the electric energy consumption (E), and take the highest temperature reading in one minute’s time (t2). Temperture rise (△t) in the temperature range of 75K ± 1K is taken as valid. Thermal efficiency is calculated as follows:

\[
n = \frac{(c1 \times m1 + c2 \times m2) \times \Delta t \times 100\%}{3.6 \times 10^6 \times E}
\]

Where

- \( n \) = Thermal Efficiency (%), accurate to one decimal place;
- \( c1 \) = Heat capacity of water, 4.18 kJ/kg · K;
- \( m1 \) = Mass of water (kg);
- \( c2 \) = Heat capacity of pot body and lid, 0.46 kJ/kg · K;
- \( m2 \) = Total mass of of pot body and lid (kg);
- \( E \) = Energy consumption (kWh);
- \( \Delta t \) = Temperature rise (\( \Delta t = t2 - t1 \)), unit K.

Repeat the above test twice, using the electrical energy (E) in the initial test record as the basis. The average value of the three thermal efficiency measurements will be taken as the thermal efficiency of the product. For devices with multiple heating units, tests should be conducted on each of the heating units.

Standby Power Consumption Test Method

6.6 Sample to be tested shall be at rated voltage, and in maximum standby power mode. Start the test when power readings (approximately 15 minutes) are stable. Record the average power consumption in one hour. Standby power consumption is calculated as follows:

\[
P = \frac{E}{t}
\]

Where

- \( P \) = Average power consumption (W), accurate to one decimal place;
- \( E \) = Measured energy consumption (Wh);
- \( t \) = Duration of measurement (hour).

7. Energy Label

Label Location

7.1 The labels should be self-adhesive or otherwise approved by the Director and affixed to the appliance at a prominent location. The participant shall ensure that the energy label appears on every registered appliance on display or sale and should be easily visible.
**Colour Scheme & Dimensions**

7.2 The energy labels shall be printed on white-coloured self-adhesive sheet material and should have colour schemes and dimensions as shown in Annex 1. It shall be printed in English and in Chinese.

**Labels Quality**

7.3 The paper or the material that is approved by the Director for the label should be durable and possess good wear and tear characteristics. It should stick tightly on the appliance.

---

**8. Testing Facilities, Laboratories and Accreditation Bodies**

8.1 The Authority will accept the results and certificates issued by the test laboratory which fulfill one of the following criteria as specified in Clause 8.2 or 8.3.

8.2 The laboratory is accredited to GB 21456 - 2014 “Minimum Allowable values of energy efficiency and energy efficiency grades for household induction cookers” or IEC 60350 “Electric cooking ranges, hobs, ovens and grills for household use-Methods for measuring performance”. The laboratory is accredited by the Hong Kong Accreditation Service (HKAS) for the relevant test under the Hong Kong Laboratory Accreditation Scheme (HOKLAS) or a scheme with which HKAS has concluded a mutual recognition agreement⁷; and the results are issued in a test report or certificate bearing the accreditation mark.

---

⁷ HKAS has concluded mutual recognition arrangements with overseas accreditation bodies for testing laboratory accreditation. The list of mutual recognition arrangement partners may change from time to time and the up-to-date list is available from the HKAS website of www.info.gov.hk/itc/hkas. Partners to these arrangements recognise the accreditations granted by one another as equivalent.
8.3 The Authority will also consider the following arrangements:

(a) Self-certification by original manufacturers that the operations of their in-house laboratories satisfies the requirements of ISO/IEC 17025; and

(b) The manufacturers currently operating according to a recognized international quality system (such as ISO 9001); and

(c) The manufacturer’s in-house laboratories had been successful in carrying out tests on induction cookers in accordance with GB 21456 - 2014 “Minimum Allowable values of energy efficiency and energy efficiency grades for household induction cookers” or IEC 60350 “Electric cooking ranges, hobs, ovens and grills for household use-Methods for measuring performance” and where these tests had been evaluated and certified by recognised independent certification body.

8.4 The recognised independent certification body mentioned in Clause 8.3 shall meet the following minimum requirements:

(a) Being recognized internationally to be competent for certifying product energy efficiency performance tests; and

(b) Having experience in assessing and certifying the relevant energy efficiency performance tests; and

(c) Having well established assessment procedures, including staff training and assessment criteria, relating to assessment and certification of energy efficiency performance tests.

Laboratory Accreditation

8.5 The Government takes cognizance of the need to ensure acceptable and compatible quality standards of testing laboratories, and considers that they need to be accredited by some independent bodies.

8.6 The criteria of accreditation should be based on ISO/IEC 17025 and accreditation bodies shall operate in accordance with ISO/IEC 17011.

8.7 The Authority will recognize accreditation granted by the HOKLAS and by overseas accreditation bodies which have concluded mutual recognition arrangements with HKAS for accreditation of testing laboratories. The Authority will consider accreditation granted by other bodies on a case-by-case basis.
9. Registration and Participation

Registration Procedures

9.1 All manufacturers, importers and the other parties involved in the appliance distribution network are welcomed and encouraged to participate in the scheme. For some known manufacturers and importers, invitation letters will be issued to them. However, any party may submit their applications for registration no matter whether they are invited or not.

9.2 The proforma letter of invitation is shown in Annex 2.

9.3 Applicant should submit formal application to

Chief Engineer /Energy Efficiency A
Energy Efficiency Office
Electrical & Mechanical Services Department
3 Kai Shing Street, Kowloon
Hong Kong

by means of an application letter through mail, facsimile or electronic mail. In order to ensure effective implementation of the scheme, the applicant must be committed to fully comply with the duties, responsibilities and obligations set out in this scheme. The proforma letter of application as shown in Annex 3 details the aforesaid obligations and shall be used for application. To facilitate the application process, the application form can be downloaded from EMSD website.

Information/Documents to be Submitted for Registration

9.4 Each make and model of an appliance participating in the scheme should be provided with a test report issued by a recognized laboratory. The test report shall contain energy efficiency test and performance test results.

9.5 Details of the general and technical information to be submitted together with the application are listed as follows:
(a) information on the company such as name, address, telephone number, fax, e-mail address, contact person, importer, distributor, etc.;

(b) products to apply for participating in the scheme such as names of products, types, brand names, models, countries of origin, etc.;

(c) parties that will be responsible for making and fixing the energy labels;

(d) commencement date to affix energy labels on appliance;

(e) Certificates of Safety Compliance prescribed by the Electrical Products (Safety) Regulation of the HKSAR (Chapter 406G);

(f) Detailed test reports shall be provided at least the following relevant technical data for the appliances:
   - rated wattage;
   - power input during the maximum heating mode;
   - energy consumption for the maximum heating mode;
   - thermal efficiency, including the detailed calculation; and
   - standby power consumption (if applicable).

9.6 Company's name and chop should be stamped on all the documents provided. All photocopy test reports submitted to the Authority shall be certified true copy by appropriate organization.

**Acceptance of Registration**

9.7 On receipt of the application, the Authority will process the application and verify whether the appliance meets the energy efficiency and performance requirements based on the submitted data. The accuracy of the submitted data, their inconsistencies and non-compliance will be dealt with in accordance with Section 11.

9.8 If the application is accepted, the participant will be notified of the result within 17 working days upon receipt of all necessary information requested. The participants will then be allowed to affix the energy label onto the 'registered' appliance. Both manufacturer and importer of the registered appliance shall ensure that the energy labels are correctly printed and affixed on the appliance in accordance with the requirements of Section 7. The proforma letter of acceptance is shown in Annex 5.
If the application is rejected, the notification letter as shown in Annex 6 will also be given within 17 working days upon receipt of all necessary information requested.

The flow chart for registration is shown in Annex 7.

**Participant’s Duties, Responsibilities and Obligations**

The participant is obliged to:

(a) submit application and information including test results in accordance with format and procedures set out in Section 9.4 & 9.5;

(b) conduct tests via recognized laboratories and to comply with the specified test methodology and classification scheme;

(c) produce and affix energy labels at his own costs;

(d) fully inform other sales agents in his distribution network once the particular make and model of an appliance is registered;

(e) allow random/ad-hoc inspection to be conducted by persons authorized by the Authority on registered appliance at his premises;

(f) conduct re-test(s) at his own costs at some recognized laboratories, if non-compliance is found on his appliance. The result of re-test(s) shall reach the Authority within the prescribed period of time specified by the Authority;

(g) inform the Authority of any change in the technical information and data that were previously submitted to the Authority together with the application letter;

(h) accept the fact that if appliance fails to perform in accordance with the requirements as given in Sections 5 and this cannot be readily rectified, the Authority may order it be de-registered from the scheme; and

(i) immediately remove all labels from appliances which had been de-registered.

The details of the registered appliances will be kept in a register maintained by the Authority. The registration records will be regularly uploaded and maintained in the EMSD internet for public and interested parties for access and information.
Termination

9.13 Under circumstances of poor performance, such as

(a) (repeated) failure to fulfill obligations set out under Section 9.11; or

(b) in any other case where the Director is of the opinion that registration of an appliance is contrary to the public interest

the Authority may de-register a registered appliance with immediate effect by giving the participant notice in writing. Once an appliance is de-registered, no one is allowed to fix an energy label on it.

De-registration may occur even when there is no legal action taken under either the Trade Description Ordinance (Chapter 326) or the Copyright Ordinance (Chapter 528).

9.14 Participant who decides to discontinue participating in the scheme or to withdraw any registered model from the registered appliances list shall give at least three months’ advance notice to the Authority.

10. Legal Provisions

10.1 This scheme is a voluntary scheme. However, a participant who abuses the scheme by giving false information may contravene provisions of the Trade Description Ordinance (Chapter 326).

10.2 No one could take advantage of the scheme by using the label on his appliances without authorization of the Authority as that may constitute an infringement of copyright under the Copyright Ordinance (Chapter 528).

11. Compliance Monitoring and Inspection

Purpose

11.1 To uphold credibility of the scheme and to maintain continuous confidence of the consumers, compliance check on energy labels on those appliances participating in the
scheme are needed. Also, to avoid the unsatisfactory situation that the non-participating parties taking advantage of the scheme by using unauthorized labels, suitable form of inspection on those unregistered appliances will also be required.

Scope

11.2 The scope of inspection includes sample checking and testing the following items:

(a) whether energy label is positioned as required in Section 7;

(b) whether energy label being displayed is of correct format in accordance with Section 7;

(c) whether unregistered appliances display unauthorized energy labels;

(d) whether the registered appliance complies with the energy efficiency and performance requirements; and

(e) whether the data submitted by the participants are correct by random re-testing.

11.3 The participants will be requested to take immediate remedial action and report the follow-up action taken if non-compliance is found on their appliances.

11.4 For a registered appliance which is found giving inaccurate energy performance data (i.e. discrepancy between the registration data and the test result is more than 5%), the Authority may request the participant to conduct separate performance tests at his own costs, in accordance with the test methodology as stated in Section 6 in one of the recognized laboratories agreed by the Authority. If non-compliance is confirmed and no remedial action is to be taken by the applicant, the Authority may order it be de-registered from the scheme. Failure to remove energy labels from the de-registered appliances after the Director has withheld his authorization for using such labels may contravene the relevant ordinances.

Inspecting Officers

11.5 The Authority will authorize inspecting officers to carry out appliances compliance monitoring and inspection. The officers will carry proper identification cards that will be produced on request during their inspection operations. However, the officer will not inform the participants in advance of their intended inspection operation.
11.6 It is the participants' duty to allow the inspecting officers to gain access to their premises to carry out inspection.

**Mode of Inspection**

11.7 Inspections will be carried out on registered appliances under the scheme on random basis. Based on the record of the registration, random inspection programmes will be developed.

11.8 In addition to the random inspections, the inspecting officers will carry out ad-hoc inspections in response to complaints. The items to be inspected in such a case will depend upon the nature of complaint and may include all types of inspection as stated in Section 11.2.

11.9 Inspections will normally be carried out at the retail outlets and appliances showrooms. Where necessary, inspection will also be done at warehouses.

11.10 The inspection results will be properly recorded for future analysis as well as on evaluation of the effectiveness of the scheme.

---

**12. Complaints and Appeal**

12.1 The Authority will be responsible for dealing with complaints from participant and other parties against matters related to the scheme.

**Complaints Handling Procedure**

12.2 The Director shall ensure that complaints are properly recorded and handled without undue delay.
12.3 The Authority shall carry out preliminary investigation on complaints and reply to the complainants within a reasonable time. For complaints that require site inspection and laboratory test, the complainant shall be notified through an interim reply.

12.4 The Authority shall inform the complainant of the results or decisions made on the complaint.

**Appeal Procedure**

12.5 A participant who is aggrieved by a decision or action taken by the Authority may appeal to the Director in writing stating the reason for the appeal.

12.6 The Director may decide to suspend the decision or action given by the Authority from the day on which the appeal is made until such appeal is disposed of, withdrawn or abandoned unless such suspension would, in the opinion of the Director, be contrary to public interest.

12.7 The Director may by notice to the appellant require that appellant to attend before him or his representative and provide documents and give evidence relevant to the appeal.

12.8 The Director shall notify the appellant of his decision and reasons for it. The decision will be final and binding.

13. **Maintenance of Scheme**

13.1 To ensure that the scheme can continue to operate effectively and efficiently after its introduction, a proper system of maintenance is needed.

13.2 The maintenance system consists essentially of:

   (a) continuous updating of the lists of participants in the scheme as follows:
(i) registered appliances with details such as registration number, date of registration or de-registration if it occurs, energy efficiency data, performance data, make, model and other related information; and

(ii) registered importers, manufacturers, local agents etc. in the distribution network with details such as address, date of registration or de-registration if it occurs, etc.

(b) periodic review of the test standards, procedures for application registration and compliance monitoring, etc. to bring them in line with the latest needs of the manufacturers, importers and retailers, etc.

(c) continuous evaluation of the effectiveness of the scheme and assessment of what changes are necessary.

---

14. **Future Development**

14.1 It is hoped that following the implementation of the scheme, the market will phase out appliances of low efficiency and public awareness of using energy efficient products will be much improved.

14.2 To further facilitate the public in choosing energy efficient appliances and raise public awareness on energy saving, the Government has introduced a mandatory Energy Efficiency Labelling Scheme (EELS) through the Energy Efficiency (Labelling of Products) Ordinance.
Energy Label Format

(Not to Scale)

Soft copies of these labels can be obtained from Energy Efficiency Office, Electrical and Mechanical Services Department.
Dear Sir/Madam,

Invitation of application for registration to participate in Voluntary Energy Efficiency Labelling Scheme for Induction Cookers

Having gone through the necessary consultations and duly considered the views from various concerned parties, the government has decided to introduce a voluntary energy efficiency labelling scheme for induction cookers to Hong Kong with effect from (__________________). The details of this scheme have been finalized and I enclose herewith a copy of the scheme document for your reference.

Being one of the major induction cooker manufacturers / importers / agents* in Hong Kong, you are invited to participate in the scheme so as to take part in promoting public awareness in energy conservation and environmental improvement to Hong Kong. If you are interested to participate in the scheme, please apply in accordance with the attached proforma letter of application and submit details including technical information in accordance with the attached Annex 4 of the scheme document to the Chief Engineer / Energy Efficiency A at the following address:

Energy Efficiency Office
Electrical & Mechanical Services Department
3 Kai Shing Street, Kowloon
Hong Kong

Should you need further clarification or information, you are most welcome to contact the undersigned or Mr. ____________ on telephone number __________.

Yours faithfully,

for Director of Electrical & Mechanical Services

Date

Chief Engineer/Energy Efficiency A
Electrical & Mechanical Services Department
3 Kai Shing Street, Kowloon
Hong Kong

Dear Sir/Madam,

Application for registration to participate in
Voluntary Energy Efficiency Labelling Scheme for Induction Cookers

Our company is the (manufacturer/importer/agent*) of induction cookers in Hong Kong. We support the introduction of the labelling scheme to Hong Kong and would like to be one of the participants in the scheme to promote energy efficiency.

We understand fully the obligations and duties stated in the scheme and will comply with all relevant requirements, in particular those specified below:

i) conduct tests via recognized laboratories and to comply with the specified test methodology and classification scheme;

ii) produce and affix specified Energy Labels at my own costs;

iii) allow random/ad-hoc inspection to be conducted by persons authorized by the issuing Authority on registered appliance at my premises;

iv) conduct re-test(s) at my own costs at some recognized laboratories, if the results of inspection suggest inaccurate energy label information being displayed. The result of re-test(s) shall reach the Authority within the prescribed period time specified by the Authority;

v) inform the Authority of any change in the technical information and data that were previously submitted to the Authority together with the application letter; and

vi) accept the fact that if appliance fails to perform in accordance with the required standard performance as given in the scheme and this cannot be readily rectified, the Authority may order it be de-registered from the scheme.

The details of information of those appliances, which we intend to register with the Authority, are shown in the attached document, and are submitted herewith for your vetting.
Annex 3

We should be grateful if you would approve our application accordingly in due course.

Yours faithfully,

(Manufacturer/Importer/Agent's Name and Company Chop)

* delete as appropriate
Information to be submitted to Energy Efficiency Office

1. Information on the company:
   Name, address, telephone and fax nos., E-mail, contact person, importer, distributor, etc.

2. Product to apply for participating in the scheme:
   Name of products, type, make, model references, countries of origin, etc.

3. Parties responsible for making and fixing the Energy Labels

4. Commencement date to affix Energy Labels on appliance

5. Detailed test reports providing at least the following relevant technical data for the appliances:
   (a) rated wattage;
   (b) power input during the maximum heating mode;
   (c) energy consumption for the maximum heating mode;
   (d) thermal efficiency; and
   (e) standby power consumption (if applicable).

6. Documentary proof that the appliance(s) comply with the Electrical Products (Safety) Regulation of the Hong Kong Special Administrative Region.

Note: Company’s name and chop should be stamped on the all documents provided.
All test reports submitted to the office shall be certified true copy by appropriate organization.

Dear Sir/Madam,

Acceptance of application for registration to participate in Voluntary Energy Efficiency Labelling Scheme for Induction Cookers

With reference to your application, I am pleased to inform you that your application to participate in the captioned scheme has been accepted.

You are allowed to affix a specified Energy Label onto each and every appliance registered under the scheme and the registered appliance(s) are as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Brand</th>
<th>Model No.</th>
<th>Registration No.</th>
<th>Effective Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>(    )</td>
<td>(    )</td>
<td>(        )</td>
<td>(              )</td>
<td>(          )</td>
</tr>
</tbody>
</table>

The registration certificate(s) of appliance registered are ready for your collection.

Should you have queries, please contact the Case Officer, Mr________ at telephone no. / email: __________ or Mr________ at telephone no. __________ / email: __________.

Yours faithfully,

(                                      )
