

Notice
Power Suspension Arrangement
for Periodic Inspection, Testing and Certification (PITC) Work

1. In order to ensure personal safety of the electrical workers and avoid affecting building power supply in case of electrical accident, the power company's electricity supply should be cut off in carrying out PITC work on main switchboard that is connected to power company's transformer.
2. For WR2 submission involving the above-mentioned main switchboard on or after 1 December 2011, the power company's record (e.g. power company's relevant correspondences or receipt, etc.) for temporary disconnection of electricity supply shall also be submitted.
3. The building owners, Incorporated Owners and property management companies may contact the power company to check for the opportunities of carrying out the PITC work at the same time with the power company's equipment maintenance work so as to avoid repeated power suspensions and hence minimize the disturbance to the building users.
4. Furthermore, the Registered Electrical Contractor should also closely collaborate with the building owners, Incorporated Owners and property management companies to work out the power suspension arrangement and temporary measures that meet the building operational needs with the aim to minimizing disturbance to the building users resulting from the PITC work.

Should there be any enquiry on the above subject, please contact our hotlines at 2808 3812 (office hours) and 1823 (non-office hours).
