

For Your Safety, Switch Off Electricity Supply, Lock Off & Affix Warning Notice, Before Electrical Work

Live work can easily cause accidents. Registered electrical contractors (REC) must arrange for the suspension of power supply to the electrical circuits concerned before electrical work can commence on the circuits. The circuit breaker or switch should be locked off where practicable and a warning notice for repair should be affixed.

Building owners, owners' corporations or property management companies should collaborate with RECs to arrange power suspension with sufficient time for workers to carry out the electrical work. The REC should also liaise closely with stakeholders to put in place power suspension arrangements and temporary measures which can match the operational needs of the building, so as to minimise the impact of the electrical work to the building users.
